## Meconium stained liquor; Guidelines for the management of labour

### See also:

- *Fetal Monitoring, Assessment of, and Response to Intrapartum Cardiographs, including Fetal Blood Sampling Guidelines*
- *Neonatal Resuscitation guideline*
- *Immediate Care of the Newborn guideline*

Recognition and appropriate management of meconium stained liquor is important because it may be associated with poor neonatal outcome. In most cases meconium is not a cause for clinical concern. Management at delivery aims to reduce the risk of meconium aspiration. Meconium Aspiration Syndrome accounts for 2% perinatal of deaths.

Meconium stained liquor increases in frequency with increasing gestation, occurring in 15-20% of labours at term. Meconium stained liquor preterm (< 37 weeks) is very rare and may be associated with Listeria infection or other medical problems and **MUST** be reviewed by the registrar.

### Description of Meconium:

- **Non –significant Meconium** – Thin, watery
- **Significant Meconium** – Dark green or black amniotic fluid that is thick or tenacious or any meconium stained amniotic fluid containing lumps of meconium. (NICE 2014).

Document the presence or absence of significant meconium in any labour after the rupture of membranes.

Significant meconium may suggest oligohydramnios or a breech presentation.

If there is no evidence of SROM but meconium is suspected the following should be done –

- a. Ballot the head between contractions to observe the liquor
- b. If no evidence of liquor review history of SROM and arrange senior obstetric review and +/- USS

Liquor should be assessed hourly and the presence or absence of significant meconium documented (NICE 2017). The Team Leader must be informed of any new significant meconium which should also be recorded on the labour ward board.

		Ratified June 2002 April 2019 April 2005 Oct 2008 August 2009 October 2014 August 2015	Last Reviewed October 2014 August 2015 April 2019	Issue 7	Page 4 of 7

**Management of labour**  
**Non-significant Meconium**

Continuous CTG monitoring is only required if **ANY** maternal observations are abnormal or if FHR abnormalities are suspected on intermittent auscultation (NICE 2014). Women with non-significant meconium, should have labour augmented at the earliest opportunity if they present prior to established labour.

**Significant Meconium**

Women with significant meconium will be under Consultant Led care. A thorough review, therefore, is to be recorded in the notes with a clearly documented plan at the earliest opportunity following confirmation of significant meconium.

CTG monitoring should be continuous (NICE 2017) because significant meconium can be associated with fetal hypoxia.

Significant meconium is uncommon, but its presence may mean that the woman is more likely to need an emergency caesarean section, therefore:

Give Ranitidine and Metoclopramide as detailed in the Care of women in labour guideline.

Follow Fetal Monitoring, Assessment of, and Response to Intrapartum Cardiographs, including Fetal Blood Sampling Guidelines.

**Birth**

A neonatal doctor is only required to attend the delivery of a woman with significant meconium stained liquor in labour, unless there are other risk factors. NICE (2017) recommend the following -

Do not suction baby's upper airways if the baby has normal respiration; heart rate and tone

Routine intubation is not required, but if the baby has depressed vital signs then laryngoscopy and suction under direct vision is essential.

**Neonatal Observations**

Neonatal observation of the baby's temperature, heart rate, respiration rate, capillary refill and general wellbeing should be undertaken as below –

- **Non-significant Meconium** – Routine observations at birth, take further observations at 1 and 2 hours old (NICE 2017). If normal, mother and baby can be transferred to the postnatal ward or a 6 hour discharge facilitated. These babies can have the Examination of the Newborn (MEON) completed by an appropriately trained midwife in the absence of any other risk factors.
- **Significant Meconium** – Routine observations at birth, take further observations at 1 and 2 hours, then 2 hourly until 12 hours (NICE 2017). The 1 and 2 hourly observations should occur on the labour ward and the neonatologists made aware; if normal, mother and baby can then be transferred to the post natal ward.

## Monitoring

Compliance with this guideline will be monitored 3 yearly by review of maternity records. Where deficiencies are identified action plans will be developed and changes implemented and disseminated as required.

## Guidance on Equalities Groups

<b>Race and Ethnic origin</b> (includes gypsies and travellers) (consider communication, access to information on services and employment, and ease of access to services and employment)	<b>Religion or belief</b> (include dress, individual care needs, family relationships, dietary requirements and spiritual needs for consideration)
<b>Disability</b> (consider communication issues, access to employment and services, whether individual care needs are being met and whether the policy promotes the involvement of disabled people)	<b>Sexual orientation including lesbian, gay and bisexual people</b> (consider whether the policy/service promotes a culture of openness and takes account of individual needs)
<b>Gender</b> (consider care needs and employment issues, identify and remove or justify terms which are gender specific)	<b>Age</b> (consider any barriers to accessing services or employment, identify and remove or justify terms which could be ageist, for example, using titles of senior or junior)
<b>Culture</b> (consider dietary requirements, family relationships and individual care needs)	<b>Social class</b> (consider ability to access services and information, for example, is information provided in plain English?)

If further assessment is required please see the Integrated Single Equality Scheme.

For advice in respect of answering the above questions, please contact, HR Manager, on extension 2552.

# PROFORMA FOR RATIFICATION OF POLICIES AND GUIDELINES BY RATIFYING COMMITTEE

<b>Policy/Guidelines Name:</b>	<b>Meconium Stained Liquor; Guideline for Management of Labour</b>
<b>Name of Person completing form:</b>	Alex Bell/Women's Health Guidelines Group
<b>Date:</b>	20/08/2015

<b>Author(s)</b> <i>(Principle contact)</i>	Sandra Newbold, Consultant Obstetrician/ Alex Bell, Senior Midwife, Governance Team
<b>Name of author or sponsor to attend ratifying committee when policy/guideline is discussed</b>	Sandra Newbold, Consultant Obstetrician/ Alex Bell, Senior Midwife, Governance Team
<b>Date of final draft</b>	04/03/2015
<b>Has this policy/guideline been thoroughly proof-read to check for errors in spelling, typing, grammar and consistency?</b>	Yes
<b>By whom:</b>	Women's Health Guidelines Group
<b>Is this a new or revised policy/guideline?</b>	revised
<b>Describe the development process used to generate this policy/guideline.</b> <i>Who was involved, which groups met, how often etc.?</i>	
Women's Health Guidelines Group, Labour Ward Forum, Obs & Gynae Consultants, Supervisors of Midwives	
<b>Who is the policy/guideline primarily for?</b>	
Health Professionals working within the maternity service	
<b>Is this policy/guideline relevant across the Trust or in limited areas?</b>	
Maternity Services	
<b>How will the information be disseminated and how will you ensure that relevant staff are aware of this policy/guideline?</b>	
Staff Meeting, Newsletters, Intranet	
<b>Describe the process by which adherence to this policy/guideline will be monitored.</b> <i>(This needs to be explicit and documented for example audit, survey, questionnaire)</i>	
See monitoring section of the policy	
<b>Is there a NICE or other national guideline relevant to this topic? If so, which one and how does it relate to this policy/guideline?</b>	
See references	
<b>What (other) information sources have been used to produce this policy/guideline?</b>	
See referenced	
<b>Has the policy/guideline been impact assessed with regard to disability, race, gender, age, religion, sexual orientation?</b>	
Yes	
<b>Other than the authors, which other groups or individuals have been given a draft for comment?(e.g. staff, unions, human resources, finance dept., external stakeholders and service users)</b>	
Paediatricians All obstetric Consultants, Women's Health Guidelines Group, Labour Ward Forum, SOM's	
<b>Which groups or individuals submitted written or verbal comments on earlier drafts?</b>	
Any comments received considered by Women's Health Guidelines Group	
<b>Who considered those comments and to what extent have they been incorporated into the final draft?</b>	
All comments considered	
<b>Have financial implications been considered?</b>	
Yes
