--	--	----------------------------------	-------------------------------	------------	--------------

1. Introduction

This Policy relates to enabling and expressing of breast milk and cleaning and storage of breast milk collection kits whilst in hospital.

Expressing Breast Milk

1.1 Support mothers to express at the cot side. This will reduce the time they are separated from the baby's and can help to promote lactation.

1.2 Encouraging skin to skin contact will help with expressing and milk supply.

1.3 When the mother feels able double pumping will save time and increase her milk supply.

1.4 Additionally, a comfortable dedicated room equipped with electric breast pumps should also be made available for mothers to express their milk.

1.5 Provide written and verbal instructions to each mother explaining how to express breast milk by hand as well as how to use and decontaminate the expressing equipment and how to label and store breast milk.

1.6 Encourage and advice all lactating mothers to take multivitamin supplements as it helps with having a good nutrition both for mum and baby through her milk content. This is particularly important for mums of preterm babies. Also encourage them to eat good amounts of protein and drink plenty of water.

1.7 Demonstrate effective hand washing techniques and provide written and illustrated guidance for mothers. Explain that hand washing prior to and after expressing breast milk is an effective means of minimising contamination of the milk with harmful micro-organisms. In additions, washing the breasts daily and a daily change of bra that has been washed using a hot machine cycle or in hot water is recommended.

1.8 The availability of a range of sized of breast pump shields will help to ensure mothers receive optimal support for expressing and prevent nipple trauma caused by ill-fitting equipment. A mother may need different shield sizes as her lactation progresses

1.9 Provide sufficient electric breast pumps for use in hospital so that mothers can express breast milk whenever they need to or are ready to. Suitable locations for electric breast pumps will include all postnatal facilities, neonatal and paediatric unit wards and family overnight rooms as well as dedicated expressing rooms.

1.10 Ensure electric breast pumps are routinely checked and maintained by clinical engineering staff in accordance with manufacturers' instructions and local equipment

Section 1 Enabling expressing of breast milk & cleaning & storage of breast milk collection kits	Current Version is held on the Intranet	First ratified: November 2020	Review date: November 2023	Issue 1	Page 3 of 11
--	--	--------------------------------------	-----------------------------------	----------------	--------------

protocols to ensure they are working safely and effectively and that milk has not been allowed to enter the pumps casing or its mechanism.

1.11 Initially provide sterile expressing equipment (collecting set and tubing) to all new mothers wishing to express their milk. This will be:

A new sterile set for a single user with cleaning / decontamination between each use followed by disposal once no longer required by the user.

1.12 Adhere to the manufacturers' instructions for decontaminating or sterilising all parts that come into contact with the mother and with her milk as long as they are in accordance with locally agreed infections control protocols. The use of the wash, rinse, dry method is appropriate in most circumstances.

1.13 The cleaning and storage of breast pump expressing kits within the home environment should continue to be disinfected in line with current advice from the Department of Health (NHS 2011). Follow the instructions supplied with chosen sterilising equipment

1.14 The cleaning and storage of bottles, cups and teats for feeding should continue to be disinfected and sterilised in line with current advice from the Department Of Health (NHS 2011)

1.15 It is not possible to prevent some microorganisms getting into expressed breast milk. However if the decontamination instructions are followed, any bacterial load should be reduced to an acceptable level.

2 Background for choice of cleaning breast kits

2.1 Milton hypochlorite solution does not provide sterilisation of equipment merely a high level of disinfection

2.2 The product has been marketed in such a way as to persuade users that sterilisation is achieved

2.3 In the **clinical setting**, soaking equipment is discouraged as there is often no record of the time the items have been soaking (Atkinson, 2001)

2.4 Milton solution is often left within the breast pump kit at the time of assembly

2.5 The effect on the infant of this solution on colostrum and ultimately the —infant is not known

Section 1 Enabling expressing of breast milk & cleaning & storage of breast milk collection kits	Current Version is held on the Intranet	First ratified: November 2020	Review date: November 2023	Issue 1	Page 4 of 11
--	---	----------------------------------	-------------------------------	------------	--------------

2.6 The process of the mother expressing breast milk increases the risk of bacterial contaminants coming in contact with expressed breast milk (EBM)

2.7 With correct hand washing, cleaning of equipment and storage of equipment such as a breast pump collection kits, bacterial contamination is unlikely (Pittard et al 1991)

2.8 The manufacturers advise disinfection of the breast pump collection set, Medela does not recommend the use of Milton or hypochlorite solution as the chemicals involved can damage parts causing them to become brittle

2.9 Leaving equipment submerged in the hypochlorite solution increases the risk of pathogenic bacterial contamination

2.10 Washing with hot soapy water using a neutral detergent, followed by dry storage offers the safest option (Medela, D’Amico et al 2003)

2.10 Possible concerns with using Milton solution within the clinical setting-

- Equipment is not always fully immersed in the solution
- Used equipment may be returned to the Milton solution without pre-cleaning
- Milton solution may be left longer than the recommended 24 hours between cleaning the container and changing the solution
- Milton solution may remain in the collection kit on assembly, possible effect on colostrum itself or a preterm infants digestive system is not known
- Damage to clothing, fabrics and working surfaces if spillage occurs
- Financial cost of solution and containers
- Staff time involved for daily cleaning of containers and changing of the solution

2.11 Washing with hot soapy water using a neutral detergent, followed by dry storage offers the safest option (Medela, D’Amico et al 2003)

2.12 Additional decontamination precautions to washing, rinsing and drying may be used if indicated by local risk assessment. The microbiological quality of the rinse water is an important consideration particularly for those infants on neonatal units.

3. Equipment

3.1 Mothers who need to express will be supplied with a sterile breast pump collection set (breast shield, white membrane, yellow valve, plastic container- for storing)

3.2 Mothers will need to be asked to supply a clean undamaged plastic container to store decontaminated kits in.

Section 1 Enabling expressing of breast milk & cleaning & storage of breast milk collection kits	Current Version is held on the Intranet	First ratified: November 2020	Review date: November 2023	Issue 1	Page 5 of 11
--	--	--------------------------------------	-----------------------------------	----------------	--------------

3.3 A new sterile bottle will be used for every milk expression

3.4 The breast expressing kit is for one person use so can be discarded on discharge. Sets can be replaced every 4 **1** weeks or sooner if parts look damaged and worn.

3.4 A sterisac will be provided to sanitise kits before every expression.

4 Method

4.1 Before and after expressing

4.2 Wash hands for 20 secs and dry hands thoroughly using the hand basin designated for hand washing

4.3 Using the sink in the milk kitchen, disassemble and wash breast pump shield, white membrane and yellow valve thoroughly using detergent- use fingers to clean the parts, not a bottle brush

4.4 Rinse under warm running water

4.5 Shake off excess water droplets

4.6 Dry thoroughly with clean white paper towels

4.7 Once dry, store in the clean plastic container. The lid should be securely placed on to prevent air born infections entering the kit when clean.

4.8 Where possible keep the kit at the cot side or labelled well in the milk kitchen with date 1st used and name of the baby

4.9 This should only be carried out for breast milk collection kits; bottles for feeding should continue to be sterilised in the same way unless a new sterile bottle is used with each feed

4.10 Before pumping sanitise the kit using the sterisac provided in the microwave

4.11 After sanitising the kit wash hands for 20 secs and carefully remove the contents from the bag to avoid scalding

4.12 Shake off any excess water, dry thoroughly with a clean paper towel , then assemble the breast kit ready for use

3. Supporting relevant trust guidelines

Section 1 Enabling expressing of breast milk & cleaning & storage of breast milk collection kits	Current Version is held on the Intranet	First ratified: November 2020	Review date: November 2023	Issue 1	Page 7 of 11
--	--	--------------------------------------	-----------------------------------	----------------	--------------

4. Guideline Governance

a. Scope

This guideline is relevant to all staff caring for babies across neonatal intensive care, transitional care and maternity.

b. Purpose

- i. This guideline aims to facilitate a common approach to the management of babies admitted under neonatal care. At times deviation from the guideline may be necessary, this should be documented and is the responsibility of the attending consultant.
- ii. This guideline is subject to regular review to ensure ongoing evidence based practice.

c. Duties and Responsibilities

All staff members involved in supporting parents with expressing should be familiar with this guidance.

d. Approval and Ratification

This guideline will be approved and ratified by the Neonatal Guidelines Group.

e. Dissemination and Implementation

- i. This guideline will be uploaded to the trust intranet 'Neonatal Guidelines' page and thus available for common use.
- ii. This guideline will be shared as part of ongoing education within the Neonatal Unit for both medical and nursing staff.
- iii. All members of staff are invited to attend and give comments on the guideline as part of the ratification process.

f. Review and Revision Arrangements

- a. This policy will be reviewed on a 5 yearly basis.
- b. If new information comes to light prior to the review date, an earlier review will be prompted.
- c. Amendments to the document shall be clearly marked on the document control sheet and the updated version uploaded to the intranet. Minor amendments will be ratified through the Neonatal Guidelines Group. A minor amendment would consist of no major change in process, and includes but is not limited to, amendments to documents within the appendices.
