Gastroenteritis Guidelines

Amendments			
Date	Page(s)	Comments	Approved by
Nov 2013	New Guideline		Paediatric Guideline Group
March 2018		Whole document review – no changes	Paediatric Guideline Group

Compiled by: Dr Amal Jessel

In Consultation with:

Ratified Paediatric Guidelines Group

Date Ratified: Nov 2013

Date Reviewed: March 2018

Next Review Date: March 2021

Target Audience: Doctors, nurses and support staff working in Paediatrics

Impact Assessment Carried Out By:

Comments on this document to: Dr Dcruz, Consultant Paediatrician

Gastroenteritis Pathway

Ashford and St. Peter's Hospitals NHS
NHS Foundation Trust

Evidence of Gastroenteritis (all three of):

- Non bilious vomiting (Frequency)
  [Duration 1-2 days, and most stop within 3 days]
- Diarrhoea (Frequency)
  [Duration - 5-7 days, and most stop within 2 weeks]
- No evidence of other medical or surgical problem*

Assess Dehydration

No clinically detectable dehydration
<5% weight loss

Alert
Normal urine output
Moist mucous membranes
Normal HR, CRT and RR

Clinical dehydration
5-10% weight loss – Red flag symptoms

Unwell or deteriorating
Altered responsiveness
Sunken eyes
Tachycardia
Tachypnoea

Clinical Shock
>10% weight loss

Decreased consciousness
Cold extremities
Weak peripheral pulses
Prolonged CRT

Fluid Therapy

Prevent dehydration

Continue breast milk feeds
ORS fluid challenge
Avoid fruit juices/carbonated drinks

Unsuccessful → One dose of Ondansetron 4mg (1-12 yr)

Oral Rehydration Therapy

50mls/kg ORS over 4 hour, plus ORS for maintenance, often and in small amounts
Consider supplementing with usual fluids if not tolerating ORS
Consider NGT

Symptoms worsen/Vomiting

IVT

IV Access
Bloods
Blood gas (inc. blood sugar)
Rapid IV bolus of 20ml/kg 0.9% Saline
If remains shocked – give 2nd bolus
Consider PICU if still remains shocked

Symptoms improved

Bloods
Fluid replacement and maintenance using 0.9% Saline/5% Dextrose
If initially shocked – add 100mls/kg
If not initially shocked – add 50mls/kg

Vomiting resolved

Discharge if
1. Oral fluid challenge tolerated
2. Hydration improved
3. Diagnosis of gastroenteritis confirmed

Continue ORS for 6 hours

Maintenance Fluids

a) 100mls/kg/24hrs for 1st 10kg
(150mls/kg/24hrs if <28days old)
b) 50mls/kg/24hrs for 2nd 10kg
c) 20mls/kg/24hrs for each successive kg

NHS Trust

Gastroenteritis Pathway

History

- Recent contact with someone with acute diarrhoea and/or vomiting
- Exposure to a known source of enteric infection (contaminated water or food)
- Recent travel abroad

*The following may indicate a condition other than gastroenteritis

- Fever > 38ºC in children younger than 3 months
- Fever > 39ºC in children 3 months or older
- Shortness of breath or tachypnoea
- Altered consciousness
- Neck stiffness
- Bulging fontanelle
- Non-blanching rash
- Blood +/- mucus in stool
- Bilious vomit
- Sever or Localised Abdominal Pain
- Abdominal distension or rebound pain

Investigations

1. Bloods tests

- Venous/capilliary blood gas (inc. blood sugar)
- FBC, U&E's (K+, Na+, Urea, Creatinine, Glucose)
- Blood Gas – if red flags or shock

2. Stool sample

Consider performing stool microbiology assessment if: (any 1 of)

- The child has recently been abroad
- Diarrhoea has not improved by day 7
- Uncertainty about the diagnosis of gastroenteritis

Perform stool microbiology: (any 1 of)

- Suspicion of septicaemia
- There is blood and/or mucus in the stool
- The child is immunocompromised
