## 1. Guidelines for the management of Hypoglycaemia in Children and Young People with Type 1 Diabetes Mellitus

### Introduction

To provide standardised, evidence-based management of hypoglycaemia in children and young people with Type 1 diabetes on insulin therapy.

### Definition:

**The definition of hypoglycaemia in children with diabetes is a blood glucose < 4.0 mmol/L.**

“4 is the floor” in diabetic patients provides a vital safety margin. Do not confuse with the lower level of 2.6 mmol/L used for patients without diabetes

### Signs and Symptoms of Hypoglycaemia (Hypo):

A child/adolescent may exhibit some of the symptoms below, whilst others may have no symptoms:

Autonomic	Neuroglycopaenic	Behavioural
<ul style="list-style-type: none"> <li>• Pale</li> <li>• Sweating/clammy</li> <li>• Hungry</li> <li>• Tremor</li> <li>• Restlessness</li> </ul>	<ul style="list-style-type: none"> <li>• Headache</li> <li>• Confusion</li> <li>• Weakness, lethargy</li> <li>• Glazed expression</li> <li>• Visual/speech disturbances</li> <li>• Seizures</li> <li>• Unconsciousness</li> </ul>	<ul style="list-style-type: none"> <li>• Irritability</li> <li>• Mood change</li> <li>• Erratic behaviour</li> <li>• Nausea</li> <li>• Combative behaviour</li> </ul>

*The list is not exhaustive and if you suspect a child/adolescent is experiencing a hypo, their capillary blood glucose **MUST** still be checked.*

***“If in doubt, check it out”***

It is important to explain to young people with Type 1 diabetes, the effects of alcohol consumption on blood glucose levels, in particular, the increased risk of hypoglycaemia including hypoglycaemia whilst sleeping.

### Treatment of Hypoglycaemia:

If the child or young person is able to tolerate oral fluids / Glucogel, [See Page 5](#)

Section 1 Management of Hypoglycaemia in T1DM	<b>Current Version is held on the Intranet</b>	First ratified: December 2013	Review date: November 2024	Issue 3	Page 3 of 12
--	--	----------------------------------	-------------------------------	------------	--------------

If Unconscious or fitting child requires parenteral therapy (IM glucagon or IV glucose), [See Page 6](#)

**Also remember:**

- Do not leave a child/adolescent with hypoglycaemia alone.
- Please inform Paediatric Diabetes Specialist Nurses *on extension 3314 or 6690* of any patients with diabetes presenting with hypoglycaemia to A&E, even if not admitted (**please note** - the PDSNs are not always in the office, so please leave a message if you do not directly speak a member of the Diabetes Team).
- If out of office hours, please record in the Diabetes Communication Folder and leave a message on the PDSN office answerphone to inform them (extension 3314 or 6690).

Section 1 Management of Hypoglycaemia in T1DM	<b>Current Version is held on the Intranet</b>	First ratified: December 2013	Review date: November 2024	Issue 3	Page 4 of 12
--	--	----------------------------------	-------------------------------	------------	--------------

**Treatment of Hypoglycaemic Conscious Child**

**1. If child is co-operative and able to tolerate oral fluids:**

**Injections = 10grams of fast acting glucose**

- 100mls full sugared fruit juice
- 3-4 dextrose or glucose tablets
- 3-4 jelly babies or fruit pastels

**Pump = 15grams of fast acting glucose**

- 150mls full sugared fruit juice
- 4-5 dextrose or glucose tablets
- 4-5 jelly babies or fruit pastels

**2. If child refuses to drink, is uncooperative but is conscious:**

Give Glucogel® or Dextrogel® (formerly known as Hypostop®). This is a fast acting sugary gel, in an easy twist top tube. **Each tube contains 10g glucose.**

**Injections = 1 tube**

**Pump = 1 & a half tubes**

Squirt tube contents in the side of each cheek (buccal) and massage gently from outside enabling glucose to be swallowed and absorbed quickly.

**DO NOT use Glucogel® in an unconscious or fitting child.**

**After 15 minutes recheck blood glucose:**

1. If still low (<4 mmol/l) and able to take oral fluids repeat **Box 1** above (once)\*
2. If still low (<4 mmol/l), refuses to take oral but is conscious, follow **Box 2** above (once)
3. If still low (<4 mmol/l) after 3<sup>rd</sup> attempt of treatment & child still conscious – **bleep Registrar**
4. If child becomes unconscious or has a seizure then proceed to Box 4 ([See Page 4](#))
5. If better and blood glucose > 4.0 mmol/L follow **Box 3** (see below)

**\*Pump = if after 1<sup>st</sup> attempt - still low (<4 mmol/l) then disconnect pump for 30-60mins**

**3. If feeling better and blood glucose level >4.0mmol/L, re-test 20-30 minutes later to confirm target (>4.0mmol/L) is maintained:**

**Injections** = Give slow acting carbohydrate snack (if pre-meal see below\*):

- One slice of toast
- Small Banana
- A cereal bar (max 15g )
- One **plain** digestive or hobnob biscuit

**Insulin Pump** = No follow up snack required

**\*Hypo pre-meal** = Treat Hypo First! Once the blood glucose is >4.0 mmol/L - normal insulin dose should be given as usual. **DO NOT OMIT INSULIN.** Consider cause of hypoglycaemic episode?

Section 1 Management of Hypoglycaemia in T1DM	<b>Current Version is held on the Intranet</b>	First ratified: December 2013	Review date: November 2024	Issue 3	Page 5 of 12
--	--	----------------------------------	-------------------------------	------------	--------------

**Treatment of Hypoglycaemic Unconscious child**

Follow this page if child unconscious or fitting (or if not responded from page 5)

CHECK CAPILLARY BLOOD GLUCOSE AND CONFIRM HYPOGLYCAEMIA (<4 mmol/l)

- Bleep Paediatric Registrar
- Place in the recovery position if possible and assess ABC
- DO NOT attempt to give any oral fluid or Glucogel®
- If IV access is present, go straight to box 5 instead of box 4 below.

**4. Give Glucagon (Glucagen) by Intramuscular injection**

- Check if IM glucagon has been given at home or in ambulance.
- Check expiry date.
- Administer intramuscularly in the thigh.

**Dose:** Age < 8 yrs or body weight <25 kg: 0.5 ml (half syringe)

Age > 8 yrs or body weight >25 kg: 1.0 ml (whole syringe)

Glucagon is a fast acting drug and the child/adolescent should respond after 5 minutes. After the child has regained consciousness, leave him/her on one side as one of the common side-effects of glucagon is vomiting/nausea.

**5. IV 10% Glucose**

If recovery is inadequate after a dose of glucagon or IV access is readily available **AND** BG <4 mmol/l, **Give 2 mls/kg 10% Dextrose** as slow IV bolus.

**\*Note:** If alcohol is involved, glucagon may be ineffective (as hepatic stores of glycogen depleted) and intravenous glucose will be required.

**Further Monitoring after severe Hypoglycaemia:**

- Check blood glucose after 5 minutes, 15 minutes and then half hourly until BG stable above 5 mmol/l
- Continue to monitor baseline observations: oxygen saturations, pulse, blood pressure, temperature
- Record presence of or absence of ketones.
- Notify the Diabetes Team during working hours & liaise with on-call team as needed
- **Do not omit normal insulin.**

Section 1 Management of Hypoglycaemia in T1DM	<b>Current Version is held on the Intranet</b>	First ratified: December 2013	Review date: November 2024	Issue 3	Page 6 of 12
--	--	----------------------------------	-------------------------------	------------	--------------

**If blood glucose >4.0mmol/L and child able to tolerate oral fluids:**

- Offer clear fluids, and once tolerating clear fluids, offer simple carbohydrates, such as toast, crackers ([see box 3, page 5](#))
- Try to identify the cause of hypoglycaemia and discuss this with the patient/family
- Refer to the Diabetes team for review of treatment, advice or education.

**If child not improving:**

- Admit for IV fluids (5-10% dextrose saline)
- If a child/adolescent remains unconscious on correction of BG consider cerebral oedema, head injury, adrenal insufficiency or drug overdose.

## **3. Supporting relevant trust guidelines**

Guidelines for Sick Day Rules

Section 1 Management of Hypoglycaemia in T1DM	<b>Current Version is held on the Intranet</b>	First ratified: December 2013	Review date: November 2024	Issue 3	Page 7 of 12
--	--	----------------------------------	-------------------------------	------------	--------------

## **4. Guideline Governance**

### **a. Scope**

This guideline is relevant to all staff caring for all children from 0-18 years old across the emergency department, inpatient ward and outpatient department.

### **b. Purpose**

- i. This guideline aims to facilitate a common approach to the management of children. At times deviation from the guideline may be necessary, this should be documented and is the responsibility of the attending consultant.
- ii. This guideline is subject to regular review to ensure ongoing evidence based practice.

### **c. Duties and Responsibilities**

All healthcare professionals responsible for the care of all children 0-18years should be aware of practice according to this guideline.

### **d. Approval and Ratification**

This guideline will be approved and ratified by the Paediatric Guidelines Group.

### **e. Dissemination and Implementation**

- i. This guideline will be uploaded to the trust intranet 'Paediatric Guidelines' page and thus available for common use.
- ii. This guideline will be shared as part of ongoing education within the Paediatric Department for both medical and nursing staff.
- iii. All members of staff are invited to attend and give comments on the guideline as part of the ratification process.

### **f. Review and Revision Arrangements**

- a. This policy will be reviewed on a 3 yearly basis by the appropriate persons.
- b. If new information comes to light prior to the review date, an earlier review will be prompted.
- c. Amendments to the document shall be clearly marked on the document control sheet and the updated version uploaded to the intranet. Minor amendments will be ratified through the Paediatric Guidelines Group. A minor amendment would consist of no major change in process, and includes but is not limited to, amendments to documents within the appendices.

**g. Equality Impact Assessment**

<p><b>Background</b></p> <ul style="list-style-type: none"> <li>Who was involved in the Equality Impact Assessment</li> </ul>
<p>Author and the supervising consultants.</p>
<p><b>Methodology</b></p> <ul style="list-style-type: none"> <li>A brief account of how the likely effects of the policy was assessed (to include race and ethnic origin, disability, gender, culture, religion or belief, sexual orientation, age)</li> <li>The data sources and any other information used</li> <li>The consultation that was carried out (who, why and how?)</li> </ul>
<p>All groups of staff and patients were taken into consideration and there is no bias towards or against any particular group.</p>
<p><b>Key Findings</b></p> <ul style="list-style-type: none"> <li>Describe the results of the assessment</li> <li>Identify if there is adverse or a potentially adverse impacts for any equalities groups</li> </ul>
<p>There is no evidence of discrimination.</p>
<p><b>Conclusion</b></p> <ul style="list-style-type: none"> <li>Provide a summary of the overall conclusions</li> </ul>
<p>There is no evidence of discrimination.</p>
<p><b>Recommendations</b></p> <ul style="list-style-type: none"> <li>State recommended changes to the proposed policy as a result of the impact assessment</li> <li>Where it has not been possible to amend the policy, provide the detail of any actions that have been identified</li> <li>Describe the plans for reviewing the assessment</li> </ul>
<p>This guideline is appropriate for use.</p>
